My Vision of 2030
By: Deetya Chandra XII-I

What does the future hold for the year 2030? Will technology unite or divide us? Will peace be more than just a headline? Will we live sustainably or continue to exhaust our planet? Envisioning the future ahead of us, a series of unanswered questions linger in my mind.

My vision of 2030 is shaped by a hope, that the spirit of humanity still thrives within us, and desires change.
Technology has the power to bridge distances, connect cultures and address global issues. We fully realize that the tools designed to connect us, could leave us isolated and even snatch away our dreams. The true impact of technology will not depend on its advancement alone, but on how we choose to use it.

The Pahalgam attack? Operation Sindoor? Is this the peaceful world we claim to live in? A religion centric approach, just for the sake of superiority, led to innocent lives being lost and left children and families terrified. The blackout was ironically a metaphor for the future that we are heading towards. Peace will be more than just a headline when we understand that no single soul is superior to another, all are equal, both outwardly and within. We breathe, we feel, we suffer, and we hope regardless of our religion, caste or race. Until that peace is achieved, no true vision for 2030 or even 2075 can be realized.

I, alongside every living species, would like to live in a world where we breathe oxygen, not carbon emissions, one where we hear joyful celebrations, not the devastation of warfare, one where technology helps us achieve our dreams, not pull them away.

True development starts with a vision but can only be accomplished when that vision is engraved within all.
