

CREATIVE WRITING COMPETITION

MY VISION OF 2030

Imagine waking up in a city that's full of life, where culture and modernity coexist, where the air is clean, roads are quiet with electric cars, and buildings and streets are filled with green and nature. This could be your everyday world in 2030. Technology will be present in all fields of life, but rather than dominating you, it will help and assist you. Rather than replacing jobs, it would assist the human employees and help them do their work better. From smart homes to AI-powered assistants, life will be easier, faster, and more connected.

In classrooms, you would not just learn from textbooks, but experience it first-hand through virtual reality. Learning will be exciting, global, and personalized. You'll be encouraged to think freely, dream boldly, and act kindly. Schools won't just prepare you for exams, but for life.

Healthcare will reach you no matter where you are. You'll have no trouble taking care of yourself both physically and mentally. No one would feel isolated, and mental health will be treated with seriousness.

You could be the leader who ensures that no one is left behind, the writer who motivates change, or the scientist who discovers a cure.

The future is something you create, not something you merely wait for. So, let's take action, have big dreams, and work together to shape 2030.
