My Vision of 2030
by Dev Gupta

By 2030, I envision the world to become a better place where Humanity, Technology and Nature coexist. The environment will breathe a sigh of fresh air as solar powered vehicles and vertical gardens replace pollution. Schools will evolve into smarted educational hubs, replaces traditional textbook knowledge with more practical and approachable form of learning. Students all over the world would be able to connect with each other through virtual reality, exploring cultures beyond textbooks.

Healthcare would become more affordable, with the help of AI powered diagnostics even in the remotest villages. Mental health would become a priority for most people.

But my vision for the year 2030 is not about technological advancements- it's about mindsets. 2030 should be a year that would go down into history where the world is one inclusive society where diversity is celebrated and every individual has equal opportunities. A world where progress is mere increasing GDP but increase empathy and sustainability.

As Dr. A.P.J. Abdul Kalam said, "The ignited mind of the youth is the most powerful resource on the earth." With that belief, I step into the future not as a spectator, but as a builder of the world I wish to see.

2030 is not a distant dream. It is a call for action- to think bigger, act wiser and care deeper. The future I imagine begins with the choices I make today.
