

By 2030, I envision a world heavily influenced by exciting, new technologies, and walking on the path of sustainability. AI will become an integral part of our lives, and the medical industry would witness a considerable transformation. I see a place where renewable energy would be primarily used for power, and most vehicles would run on electricity. Most importantly, education would be accessible to all, and accessing education would be easier for children living in remote areas.

I also envision India becoming a superpower by 2030. Economic reforms would help in the eradication of poverty, and more than 80 percent of the population would be literate. Every citizen would have access to quality healthcare, as well as other basic amenities. Terrorism would have no place in the country, and such atrocious acts would be met with severe consequences. And last but definitely not least, all forms of religion would be respected, and no religion-based discrimination would take place.

However, for this to be true, everybody must acknowledge the responsibilities we have as citizens. Only then can we ensure that the future remains as good as ever.
