

My Vision for 2030

By Riddhima Sengupta (XI-J)

"India should walk on her own shadow – we must have our own development model."

-Dr. APJ Abdul Kalam

I envision India as a nation marked by innovation and growth, technological advancements, and social harmony by 2030. The country will transform for the better, and education will be the backbone of this transformation. Schools and colleges will adopt experiential learning, which will include traditional methods of teaching, as well as AI and digital tools, ensuring that every student – regardless of their background – has access to quality education. Moreover, the education system will include practical knowledge.

The healthcare system will be more robust and accessible. Public hospitals will evolve, equipped with modern technology and medicine. This will not only be helpful for patients from rural backgrounds, but will ensure wholesome development of India as a nation. Mental health awareness will become mainstream, gaining recognition in the eyes of the citizens.

Environmental protection will hold utmost importance. Cities will adopt green practices, promote electric vehicles and carpooling, and conserve water and air resources. This will lead to afforestation and rural areas will benefit from sustainable agriculture.

The political system will be more transparent and fair. Young leaders with integrity will emerge, reducing and maybe even eradicating corruption altogether.

My vision for 2030 is one of unity in diversity, where innovation blends with tradition, and where India becomes a beacon of progress, peace, and sustainability for the world.

-Riddhima Sengupta (XI-J)
