

MY VISION OF 2030

"The best way to predict the future, is to create it". Imagine waking up in a world with clean air, no poverty and advanced technology. In my vision of 2030, that's the world I see. In this world, cities are not just sustainable, but regenerative. Waste is no longer waste, but a raw material for something new. Cities are no longer polluted, and electric vehicles dominate the roads. The air we breathe feels cooler, cleaner and fresher.

In this world, education would be transformed, making problem solving, creativity, stress and anger management, the main focus. Students would be prepared not just for jobs, but for life. I believe that this would be the most important transformation, as it has the power to unlock every other change we hope to see in the world. When people are educated, they gain the tools to solve problems, dream bigger, and build a better future, not just for themselves, but for the planet as well.

In this future, I see myself as someone who uses ideas and technology to make life better for the rest of the world. We, the upcoming youth would work together and solve problems like climate change, global warming and resource depletion. We would listen to each other, celebrate our differences, and build a world where everyone belongs.

2030 is not very far away. It's our opportunity to create a world that's bright, fair, and hopeful. So let's not wait for the future to arrive, let's create it together.
